

# PAYJUNCTION

Where increased sales and lower costs meet.

## Process Credit Cards Through Any Computer

### CashMachine® Virtual Terminal

CashMachine® is an efficient and scalable technology that allows businesses to process credit cards through any computer with an Internet connection. This technology is designed to replace the outdated physical terminals that process through a phone line. You simply swipe the credit card, enter the transaction amount, and click the "process" button to accept payments. The CashMachine® virtual terminal can be deployed and activated at any location within seconds, and there is no software to install. You have 24/7 access to real-time accounting, batch control, account settings, and credit card processing.

### What are the benefits/ ROI from CashMachine®?

- Reduction of credit card processing fees.
- Elimination of outdated physical credit card terminals.
- Elimination of the dedicated phone lines for the terminals.
- Instant upgrades without investment in new hardware.
- Rapid deployment and scalability of processing capabilities.
- Faster transaction processing.

### CashMachine® Functions

- Access to an easy interface for processing transactions.
- Swiped or manual credit card transactions.
- Secure access from anywhere in the world with Internet.
- Web based real-time accounting of transactions.
- Recurring transactions for subscriptions or memberships.
- Fraud protection via (AVS) and (CVV2) settings.
- Instant functional updates.
- No software to install.
- E-commerce and wireless credit card terminal monitoring.
